<a href="#">Hy50 Heavy Duty Hydraulic Pump</a>	<p>N° 1 DRAGFLOW HYDRAULIC PUMP HY50 – Hydraulic pumps with agitator to prevents solids from blocking the pump inlet and mixing them with the liquid, creating a slurry that can easily be handled by the pump. – Solid concentration can vary from 5% to 70% by weight of pump capacity due to the kind of material to be pumped, the delivery distance, the working depth, static head and dredging operation . – Note, you get the max production with sand and silt both well diluted while the efficiency decreases significantly with hard and plastic clay. According to the delivery distance, the static head and working depth, the pump changes the working point on the performance curve and as a consequence capacity and production (see performance curve). – They are suitable to handle high abrasive materials thanks to low rotation speed which decreases wear and tear to the parts subjected to abrasion. – Solids passage: 35 mm Technical specifications – Weight: 610 kg – Cross Section: 35 mm – Impell</p>
